

**PRESS RELEASE 9.2.2007**

**GRANDEZZA 28 WA - UNVEILING AT THE HELSINKI INTERNATIONAL BOAT SHOW AT 13.00 ON 9 FEBRUARY**

**The Grandezza 28 WA launches the new Grandezza WalkAround series. The new model in the popular Grandezza series, as with the rest of the series, comes with a stylish and high-level of equipment. The Grandezza 28 WA gets its premiere on the day for the press and invited guests at the Helsinki International Boat Fair, Vene 07, on Friday 9 February 2007.**

The Grandezza 28 WA is the first Walkaround model in the Grandezza range. The boat has a light and open cockpit which receives additional light from the electrically operated panoramic roof fitted with darkened selective glass. The style and equipment of the cockpit is typical of the Grandezza range, and in accordance with current requirements a pre-installed 12" map plotter for the console is available.

The boat accommodates eight people. The open area of the boat at the stern is safe and practical. There are four sleeping berths; the boat has double beds in both the front and middle cuddies. A spacious pantry and water WC add to the liveability and give the feeling of a larger boat than its actual class. As is typical with the Grandezza range, the list of options is large; extras available include e.g. a TV, CD player, DVD, shower, GPS and radar.

The Grandezza 28 WA is available in a range of five different engine sizes, of which there is a choice of three single-engine alternatives (Volvo Penta D4-260, Volvo Penta D6-310 and Volvo Penta D6-350) and two are double-engine configurations (2 x Volvo Penta D3-190 and 2 x Volvo Penta D3-160).

The Grandezza family of boats is based on high quality design and styling from southern Europe and the reliable Scandinavian boat construction tradition. The boats have a very high level of standard equipment in addition to the extensive range of optional extras. The materials and finishing are of the highest quality. The aim of the product development of the range is to create a high-class family of products that satisfies the needs of an wide-ranging international clientele.

The rapid development of the range is based on Finn Marin's new product development concept, which is based on the best boat construction and design skills and the use of new technology in designing boats and mould manufacturing. The boat manufacturing process uses top designers, industrial designers, 3D modellers, professional boat builders and CNC assisted model manufacturing technology.
